

Hello World

Lucas Augusto

03/07/2020

This is a Markdown File

I'll use this as a test for Markdown Projects

This is in **bold** while *this is in italics*

It's also easy to ~~strikethrough~~ texts and make superscripts, as in m²

I can also create links, for instance the link to my github page

```
## [1] "I can also write texts using the command print"
```

```
print("but the command itself will only show if I don't use echo=FALSE")
```

```
## [1] "but the command itself will only show if I don't use echo=FALSE"
```

“If I’m trying to quote someone, I can do that as well” - Me

Lists are also possible if:

- You enroll in a Data Science Course
 - Especially if it is the one available on Coursera
- You read the R Markdown Cheat Sheet

What about a simple table?

Name	Age	Profession
Lucas	25	Chemist
João	24	Artist

An equation is also possible: $n = p.V/R.T$
